

Subject: Co-operative Education Program (PHMA)

Dear Sir,

Department of Textile Engineering, NED University of Engineering & Technology intends to start a co-operative education program in collaboration with different textile industries of Karachi. The basic idea of this program is to give industrial exposure to our students throughout their 4 year Bachelors degree program.

This program will be initiated from the Batch 2022 (B.E. Textile Engineering & B.Sc. Textile Science). This batch is in the second year. Under this program the selected students will be called as Campus Ambassador or Fellow of the respective industry. The industry has to offer the internship to the selected students in their Ramadan and Summer Breaks (March & August 2024 and 2025).

The industry can also offer the students the final year design project. The students will remain connected with the industry for a period of more than two years. This may help the industry to replace their MTO program. The students can be given direct responsibilities whenever they graduate. We believe that this program will help us to produce good professionals having theoretical knowledge and practical experience.

At least two students must be selected by each industry. The industry will share an advertisement with us by the first week of October 2023 regarding this program giving the eligibility criteria related to the C.GPA of students. The students will be called for the interview and selected jointly by the industry and the faculty.

If the industry desires, it can sponsor the educational expenses of the selected students. They can take this decision after monitoring the first internship of these students. If you need any further information in this regard, I can provide you.

Best Regards

Prof. Dr. Sheraz H Siddique
